Project 1 Form

Name	Student Id

Feature List

Please mark the features you have implemented in your game (Write a "**yes/✔**" in the "**Done**" column or leave it empty). If you have features that aren't listed, list them yourself in the last table and the teacher will decide how to rate them.

The students are required to implement all base requirements.

Base Requirements

Feature	Done
Core Gameplay Loop Recreate one of the example gameplay loops or your own idea that satisfies all other base requirements in this list.	yes
Main Menu A main menu scene with at least 2 buttons to play and exit the game.	yes
Pause Menu Can pause the game and resume/quit.	yes
Audio At least 1 sound effect and 1 soundtrack/music piece.	yes
Custom Shaders At least one shader custom made via shadergraph or written in a shader language.	
Physics Interaction Using Unity's physics to detect collisions or using queries like raycasts for gameplay.	yes
Difficulty Scaling The game gets progressively harder in some way.	yes
Highscore System Saves the highscores on the device. (Google for "PlayerPrefs")	yes
Post Processing The game uses at least one dynamic post processing effect on the camera. Dynamic meaning that it changes based on certain circumstances like receiving a point or failing.	yes
VFX The game has at least one VFX integrated into its gameplay using either Shuriken or VFX graph.	yes
Singleton Pattern Use the Singleton pattern for at least one element in your game	yes

Additional features and assets (write down if you have done anything extra)

Feature / Asset
Game Over Menu for the Highscore to show up

Sharing the game (Optional, 2.5% bonus)

You can host your game on itch.io and we will share it with this year's and the following year's classes. This will give you a small 2.5% bonus on the grade.
